

Oil Spill Prevention, Control, and Countermeasure (SPCC) Plan and Compliance in California

Let us streamline your SPCC Plan for improved onsite compliance and implementation

Is your facility compliant with current APSA requirements?

If your facility has a Tank in an Underground Area (TIUGA), revisions to the Aboveground Petroleum Storage Act (APSA) require an SPCC Plan even if total oil storage capacity is less than 1,320 gallons.

When was the last time your SPCC Plan was reviewed and updated?

All SPCC Plans should be reviewed and updated at least once every five (5) years or within 6 months of a change at your facility. ALG can thoroughly review your current operations and update your SPCC Plan accordingly.

Is your plan organized in a manner that facilitates compliance?

Is your plan too complicated and cumbersome to be useful? Let ALG simplify and streamline your plan into an effective document.

Are you interested in using a cloud-based application?

Are you having trouble locating regulatory forms? Are you worried about missing compliance deadlines? If so, a cloud-based application might be the solution. Whether you are sitting at your desk or in the field, you will have the ability to complete a form, assign an inspection, report a spill, document a cleanup, and have immediate access to all your compliance documentation.

Our Approach:

- Use of seasoned technical staff at competitive rates
- Clear and frequent client communication
- Early recognition of key issues
- Thorough and comprehensive deliverables
- Effective use of client resources
- Leverage our broad experience and resources to streamline and clarify the process
